## Abstracts

According to our (Global Info Research) latest study, the global Urinary Self-Catheter market size was valued at USD 1903.2 million in 2023 and is forecast to a readjusted size of USD 2691 million by 2030 with a CAGR of 5.1% during review period.

In urinary catheterization a latex, polyurethane, or silicone tube known as a urinary catheter is inserted into a patient's bladder via the urethra. Catheterization allows the patient's urine to drain freely from the bladder for collection. It may be used to inject liquids used for treatment or diagnosis of bladder conditions. A clinician, often a nurse, usually performs the procedure, but self-catheterization is also possible. The catheter may be a permanent one (indwelling catheter), or an intermittent catheter removed after each catheterization. A urinary catheter is a tube placed in the body to drain and collect urine from the bladder.

The industry's leading producers are Coloplast, BD and Teleflex, which accounted for 35.13%, 11.48% and 10.49% of revenue in 2019, respectively.
