Urinary vet cat food is a specialized type of feline diet formulated to support the urinary tract health of cats, particularly those prone to conditions such as urinary crystals, bladder stones, or feline lower urinary tract disease (FLUTD). These veterinary-prescribed diets are designed to promote an optimal urine pH and often contain controlled levels of minerals like magnesium, phosphorus, and calcium to help reduce the risk of stone formation. Some formulations also encourage increased water intake to dilute the urine and support bladder function. Typically recommended by veterinarians, urinary cat food plays a key role in both the management and prevention of urinary health issues in cats.
