Abstracts

The global Urine Catheters market size is expected to reach \$ 4908 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Urinary Catheters are single-use or short-term medical devices used for urine drainage, bladder management and urinary retention relief through intermittent catheterization, indwelling urethral catheterization, suprapubic access or external male collection. They are widely used in hospitals, long-term care, home care, rehabilitation and urology procedures. In 2025, Global Urinary Catheters sales are estimated at about 6,300 million units, with an average ex-works price of around 0.52 US\$/Unit. The urinary catheter value chain includes upstream medical PVC, silicone, latex, TPU, hydrophilic coatings, lubricants, sterile packaging and catheter connectors; midstream catheter and catheter-kit manufacturers; and downstream users including hospitals, urology departments, ICUs, operating rooms, long-term care facilities, rehabilitation centers and home-care channels.

The market is mainly driven by aging populations, neurogenic bladder, post-operative urinary retention, spinal cord injury, long-term care and rising home-based self-catheterization. Product upgrades are focused on hydrophilic coatings, no-touch closed systems, portable packaging, gender-specific designs and infection-reduction features.

This report studies the global Urine Catheters production, demand, key manufacturers, and key regions.
