Urodynamic Manometric Catheter is a specialized medical device used in urodynamic studies to measure pressure within the bladder and urethra. It consists of one or more pressure sensors embedded along its length, allowing for the accurate detection of pressure changes during bladder filling and voiding phases. This catheter helps clinicians assess the function of the lower urinary tract, diagnose conditions such as urinary incontinence, obstruction, or neurogenic bladder, and determine appropriate treatment strategies. Typically inserted into the bladder via the urethra, the catheter is connected to a recording system that displays pressure data for clinical interpretation.
