Urodynamic Testing Catheter is a specialized medical device used during urodynamic studies to assess how well the bladder, sphincters, and urethra store and release urine. This thin, flexible tube is inserted into the bladder through the urethra to measure internal pressures and volumes during bladder filling and emptying. It often contains sensors or multiple lumens to record pressure readings in the bladder and abdominal cavity simultaneously, allowing for the evaluation of bladder function, urinary flow, and potential dysfunctions such as incontinence or obstruction. Urodynamic catheters are essential tools in diagnosing lower urinary tract disorders and guiding appropriate treatment plans.
