According to our (Global Info Research) latest study, the global Urokinase market size was valued at US\$ 51.2 million in 2024 and is forecast to a readjusted size of USD 72.2 million by 2031 with a CAGR of 5.1% during review period.

Urokinase, also known as urokinase-type plasminogen activator (uPA), is a serine protease present in humans and other animals. The human urokinase protein was discovered, but not named, by McFarlane and Pilling in 1947. Urokinase was originally isolated from human urine, and it is also present in the blood and in the extracellular matrix of many tissues. The primary physiological substrate of this enzyme is plasminogen, which is an inactive form (zymogen) of the serine protease plasmin.

Global key players of urokinase include Syner-Med, LIVZON, Wanhua Biochem, etc. The top three players hold a share about 50%. China is the largest market of Urokinase, holding a share about 56%, followed by Europe and North America.
