Abstracts

According to our (Global Info Research) latest study, the global Urolithin A market size was valued at US\$ 40.5 million in 2024 and is forecast to a readjusted size of USD 60.5 million by 2031 with a CAGR of 6.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Urolithin A is a natural compound with multiple biological activities. It is a yellow or light yellow solid powder at room temperature and pressure. It can be dissolved in highly polar organic solvents such as dimethyl sulfoxide and N,N-dimethylformamide, but has poor solubility in low-polar petroleum ether and ether, and also has poor solubility in water.

Urolithin A is a secondary metabolite of the natural polyphenol compound ellagitannin metabolized by intestinal microorganisms, and is also an intestinal microbial metabolite of ellagic acid. After the human body ingests ellagitannin and ellagic acid, urolithin A is metabolized by intestinal flora.

Urolithin A can inhibit the activity of nuclear factor κ B (NF- κ B), reduce the production of inflammatory factors, and thus reduce inflammatory damage. As a mitochondrial autophagy inducer, urolithin A can prevent muscle aging and promote cell health, thereby playing an anti-aging role. It can also inhibit the activity of telomerase and delay cell aging. Urolithin A can scavenge free radicals in the body, protect cells from oxidative damage, and maintain the normal physiological functions of the body. It can also bind to peroxisome proliferator-activated receptor α (PPAR α) and activate the

PPAR γ signaling pathway, thereby enhancing the antioxidant capacity of cells.

With the improvement of people's living standards and the enhancement of health awareness, the demand for natural compounds with health functions continues to increase. Urolithin A, as a natural compound with multiple biological activities such as anti-inflammatory, anti-aging, and antioxidant, meets this market demand.

In recent years, scientific research on urolithin A has continued to deepen, revealing more of its biological activities and health benefits. These research results provide a solid theoretical basis for the application of urolithin A and promote the development of its market.

The continuous advancement of preparation technology, especially the research and development and application of new preparation processes such as biofermentation, has improved the preparation efficiency and purity of urolithin A, reduced production costs, and provided technical support for its wide application.

Urolithin A has broad application prospects in many fields such as dietary supplements, cosmetics, medicines, and health products. This wide range of application areas provides broad space for the market development of urolithin A.
