The global Urological Surgery Endoscope market size is expected to reach \$ 579.1 million by 2029, rising at a market growth of 5.3% CAGR during the forecast period (2023-2029).

Ureteroscopy is a tubular instrument that enters the ureter from the urethra through the bladder. The front end of the ureter has a mirror surface. It can transmit the image to the other end by reflection or light machine. The structure and pathological changes of the ureter can be observed through the ureteroscopic window. Through the above experiments, we can judge the corresponding symptoms.
