Urology balloon drainage catheter is a medical device commonly used for drainage and voiding management of the urinary system. It consists of a soft catheter and a balloon, usually made of medical-grade silicone or another suitable material. This catheter is usually inserted through the urethra into the bladder to drain urine or medication, to help remove fluid from the bladder, relieve urine retention, or perform other therapeutic procedures. A balloon is located at the end of the catheter and is inflatable to ensure stability and fixation of the catheter to avoid accidental dislodgement.
