## Abstracts

Urology robotic surgery is a new field that makes use of robots in urology surgeries. These robotic surgeries are designed to improve the workflows, procedure guidance, and peer collaboration during surgical procedures. They aim to maximize efficiency and reduce time & complications of urological surgeries.

### SCOPE OF THE REPORT:

This report studies the Urology Robotic Surgery market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Urology Robotic Surgery market by product type and applications/end industries.

The growing preference for minimally invasive (MI) surgeries over open surgical methods is estimated to drive the growth prospects for the global urology robotic surgery market during the forecast period. With the increasing preference for MI surgeries, the adoption of robotic-assisted techniques is also increasing. To enhance the overall surgical outcome by reducing the recovery time, hospital stay, and postoperative pain, most surgeons prefer robotics to perform complicated surgeries in areas such as urology and gynecology. Robot-assisted techniques allow precise movement of instruments and give a better view of the target area compared to other conventional techniques. Also, robotics is used to perform prostatectomies for prostate cancer and operations on the colon, bladder, rectum, and kidney for the treatment of chronic diseases. This recent rise in the number of surgical procedures is expected to drive the global urology robotic surgery market during the estimated period.

The Americas accounted for the maximum market share and is estimated to continue to dominate the market until the end of 2023.

The global Urology Robotic Surgery market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Urology Robotic Surgery.
