Abstracts

A USB duplicator is a device used to quickly and easily copy data from one USB drive to multiple USB drives simultaneously. This is commonly used in situations where large amounts of data need to be distributed to multiple recipients, such as in a business or educational setting. The duplicator typically has multiple USB ports where the original drive is inserted, and then the user can select how many copies they want to make and start the duplication process. This saves time and effort compared to manually copying the data to each individual drive.

According to our (Global Info Research) latest study, the global USB Duplicator market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
