The USB laparoscopic camera is a portable medical imaging device that connects to a computer or monitor via a USB interface to transmit high-definition endoscopic images of laparoscopic surgery in real time. It uses a CMOS or CCD sensor, supports 1080P/4K resolution, has low-light enhancement, automatic white balance and anti-interference functions, and is compatible with mainstream laparoscopic instruments. It is small in size and plug-and-play, suitable for scenarios such as grassroots hospitals, emergency and animal medicine, and lowers the threshold for minimally invasive surgical equipment. Some models support wireless transmission or AI-assisted analysis and comply with the DICOM medical imaging standard.
