Abstracts

The global USB4 Hub Controller market size is expected to reach \$ 3200 million by 2032, rising at a market growth of 21.9% CAGR during the forecast period (2026-2032).

A USB4 hub controller is a chip that expands a single USB-C port into multiple ports, enabling high-speed data transfer, display output, and power delivery to connected devices. It integrates the complex functions of USB4, such as packet routing, protocol tunneling for different standards (like PCIe and DisplayPort), and high-speed signaling, to create a multi-port hub. These controllers are essential for modern docks and hubs that need to manage bandwidth and provide connectivity for a variety of peripherals simultaneously.

In 2025, the global production of USB4 hub controllers was 128 million units, with an average price of \$6.2 per unit.

This report studies the global USB4 Hub Controller production, demand, key manufacturers, and key regions.
