According to our (Global Info Research) latest study, the global Used Aluminum Can Recycling market size was valued at US\$ 4127 million in 2025 and is forecast to a readjusted size of US\$ 5499 million by 2032 with a CAGR of 4.1% during review period.

Used aluminum can recycling refers to the industrial activity of collecting, sorting, compressing, crushing, removing coatings, and remelting waste aluminum beverage/food cans to produce new can stock, aluminum sheets and strips, or other recycled aluminum products. It revolves around a high-purity, traceable, and closed-loop recycling system. The core application is closed-loop recycling of beverage and food packaging. In addition, recycled aluminum also enters similar packaging scenarios such as aerosol cans, pharmaceutical packaging, and paint spraying cans. The upstream mainly consists of aluminum beverage can consumers and waste can generators, including households, supermarkets, convenience stores, restaurants, sports/entertainment venues, vending machines, and can manufacturing scraps. The midstream involves recycling and processing, with a typical process: collection ? MRF/sorting center distribution ? compressing ? impurity/coating removal ? crushing ? smelting ? ingot casting ? hot/cold rolling ? can stock. The downstream includes can stock manufacturers, can manufacturers, beverage brands, and some open-loop consumers. The gross profit margin is approximately 10%?20%.
