Abstracts

The global Used Beverage Aluminum Can Recycling market size is expected to reach \$ 4227 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Used beverage aluminum can recycling refers to the industrial activity of collecting, sorting, compressing, crushing, removing coatings, and remelting waste aluminum beverage cans to produce new can stock, aluminum sheets and strips, or other recycled aluminum products. It revolves around a high-purity, traceable, and closed-loop recycling system. The core application is closed-loop recycling of beverage packaging. In addition, recycled aluminum also enters similar packaging scenarios such as aerosol cans, pharmaceutical packaging, and paint spraying cans. The upstream mainly consists of aluminum beverage can consumers and waste can generators, including households, supermarkets, convenience stores, restaurants, sports/entertainment venues, vending machines, and can manufacturing scraps. The midstream involves recycling and processing, with a typical process being: collection ? MRF/sorting center distribution ? compressing ? impurity/coating removal ? crushing ? smelting ? ingot casting ? hot/cold rolling ? can stock. The downstream includes can stock manufacturers, can manufacturers, beverage brand owners, and some open-loop consumers. Gross profit margins range from approximately 8% to 20%.
