Abstracts

According to our (Global Info Research) latest study, the global Used-car Trading E-commerce market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

E-commerce in automotive is starting to penetrate spare parts and vehicle purchases, with implications for OEMs, dealers, LSPs and customers

In the early days of eBay and Amazon, consumers marvelled at their own boldness. Buying on the internet was a step into the unknown: sending money to strangers to purchase items that they hadn't seen and couldn't touch. Fifteen years on, e-commerce no longer seems so alien. Checks and balances serve to keep buyers and sellers honest while transaction feedback mechanisms reinforce good behaviour.

That said, e-commerce remains the exception for the second largest purchase many consumers will make, after their house or apartment: a new, or nearly new, car.

According to International Telecommunication Union (ITU), the global Internet users (online population) were more than 5 billion. And the number of online shoppers was also increasing. In 2022, the global e-commerce market penetration rate increased to 19.7%, and the e-commerce market reached \$5.5 trillion. At the same time, the Asian e-commerce market ranked at the top of the revenue ranking, which has reached \$1.8 trillion. According to the National Bureau of Statistics, China was the largest online retail market in 2022, with online retail sales of 13.79 trillion yuan and a year-on-year increase of 4%. Among them, the online retail sales of physical goods were 11.96 trillion yuan, with a year-on-year increase of 6.2%, which accounted for 27.2% of the total retail sales

of consumer goods.
