The global Used Lawn Mowers market size is expected to reach \$ 10691 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032). In 2025, global Used Lawn Mowers production reached approximately 5.76 million units, with an average global market price of around US\$200-US\$2,000 per unit. In 2025, the global 's total production capacity of Used Lawn Mowers reached 7.2 million units. The industry average gross profit margin of this product reached 25%.Used Lawn Mowers, in the international market, broadly refer to lawn mowing equipment transferred from previous owners to new buyers, regardless of their condition. This includes models such as fuel-powered, electric, and robotic mowers, primarily sourced from individual upgrades and trade-ins, rental company retirements, or resale by professional refurbishers. Because their prices are typically 30%-70% lower than new machines, they offer significant value and are highly favored by budget-conscious home users or small gardening companies. Some distribution platforms also enhance product credibility by offering quality inspections and limited warranties.

The Used Lawn Mowers supply chain is a complete system encompassing supply, refurbishment and integration, distribution and sales, regulatory services, and end-use. The upstream of the supply chain consists of individual home users upgrading their equipment, gardening rental companies regularly updating their fleets, and traders recycling equipment from overseas markets. The midstream is the refurbishment and integration stage, comprised of professional refurbishers, large distributors, and used equipment auction platforms, which are responsible for equipment inspection, repair, refurbishment, grading, and integration. Downstream is the sales and distribution channel, reaching end buyers through online e-commerce platforms, offline physical secondhand markets, dealer networks, and direct business-to-business (B2B) transactions. In addition, a crucial supporting link is regulation and related services, involving import and export inspection, customs clearance, logistics and transportation,

and third-party quality inspection and assessment services. Ultimately, these devices flow into end-use markets, primarily meeting the operational needs of home gardening and small commercial landscaping companies.

The global used lawnmowers market is poised for continued expansion and a bright growth outlook in the coming years, but it also faces uncertainties. Favorable factors driving market development include its outstanding cost-effectiveness, effectively reducing initial investment costs for both home and commercial users; and the increasing popularity of the circular economy concept, promoting the reuse of equipment resources. However, the industry also faces challenges, such as the potential for adjustments to the US tariff framework in 2025, which could trigger global market volatility and supply chain restructuring. Overall, driven by cost-effectiveness and rising environmental awareness, the used lawnmower market is expected to maintain steady growth, but participants need to closely monitor changes in macroeconomic factors such as international trade policies.
