Abstracts

According to our (Global Info Research) latest study, the global User Virtualization Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

User virtualization is connected to the concept of desktop virtualization where the desktop environment is a virtual machine stored on a remote server. The key thing here is that there are two kinds of virtualized desktop infrastructure (VDI): Persistent and non-persistent VDI. Persistent VDI means that the virtual image on the user's desktop can be personalized with the addition of data, shortcuts, files, etc. Every time the user logs into the virtual machine, the image reflects changes made earlier. Non-persistent VDI is the opposite of that: Every time a user logs out, the computer reverts to its original state and the user sees the same image every time he or she logs in. The advantages of non-persistent images are that they are much easier to manage, require less storage, and are easier to patch and update.

The Global Info Research report includes an overview of the development of the User Virtualization Software industry chain, the market status of SME (Small and Medium Enterprises) (Non-persistent VDI, Persistent VDI), Large Enterprise (Non-persistent VDI, Persistent VDI), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of User Virtualization Software.
