Abstracts

Uterine fibroid embolization (UFE) is an effective, non-surgical method used to treat uterine fibroids in the fertile women population. It is performed with the help of uterine fibroid embolization agents, delivered to the tumor by micro-catheters. The embolization agents block the arteries supplying blood to the tumor and force them to shrink.

According to our (Global Info Research) latest study, the global Uterine Fibroid Embolization Agents market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The increased awareness about the uterine fibroids amongst women and popularity of minimally invasive procedure will drive the global market for uterine fibroid embolization agents. In addition, the fact that UFE allows woman to preserve their uterus, otherwise not possible with full or even partial hysterectomy will further drive the market.
