Abstracts

According to our (Global Info Research) latest study, the global UTG Ultra-thin Flexible Glass market size was valued at US\$ 1429 million in 2025 and is forecast to a readjusted size of US\$ 2036 million by 2032 with a CAGR of 5.2% during review period.

In 2025, global UTG Ultra-thin Flexible Glass production reached approximately 55.54 million square meters, with an average global market price of around US\$25 per square meter.

UTG Ultra-thin Flexible Glass refers to a specialty glass material typically around 20?100 ?m thick that can be used in foldable, bendable, or flexible display devices after ultra-thin forming, cutting, thinning, chemical strengthening, edge processing, and surface functional treatment. UTG retains the advantages of glass, such as high transparency, low haze, high surface hardness, low surface roughness, and premium touch feel, while providing a certain level of bending capability. It is used as a cover window or protective layer for foldable smartphones, foldable tablets, flexible OLED display modules, wearable devices, and automotive flexible displays. Compared with transparent CPI film, UTG offers better scratch resistance, optical clarity, surface texture, and aging resistance, but requires stricter control over thickness uniformity, edge strength, microcracks, bending radius, and lamination processes.

The upstream supply chain of UTG includes high-purity silica sand, alumina, borates, alkali oxides, specialty glass raw materials, glass melting and down-draw equipment, cutting and grinding equipment, chemical strengthening salt baths, polishing slurries, functional coatings, OCA optical adhesives, and protective films. Representative suppliers include Corning, SCHOTT, NEG, AGC, Dow, 3M, Nitto, Mitsubishi Chemical,

Fuyao Glass, and CSG. Midstream companies handle UTG glass substrates, thinning, strengthening, cutting, edge processing, lamination, and module integration, with representative players including SCHOTT, Corning, NEG, AGC, Samsung Display, Dowoo Insys, Triumph Science & Technology, and related display-material processors. Downstream applications include foldable smartphones, flexible OLED modules, wearable devices, tablets, laptops, and automotive displays, with representative companies such as Samsung Electronics, Honor, Motorola, Xiaomi, Huawei, OPPO, vivo, Lenovo, Apple, BOE, TCL CSOT, and LG Display.

The UTG ultra-thin flexible glass market is currently driven by foldable-device growth and continuous material-process upgrades. Major demand comes from foldable smartphones, foldable tablets, flexible OLED modules, wearables, and automotive flexible displays. Key trends include thinner glass, smaller bending radius, longer bending life, stronger impact resistance, reduced crease visibility, higher yield, and integrated solutions with OCA, protective films, and hard coatings. Growth drivers include increasing foldable smartphone penetration, product differentiation among device brands, mature flexible OLED technology, and stronger consumer demand for glass-like touch and scratch resistance. Main challenges include difficult UTG processing, edge microcrack and breakage risks, complex yield control, higher cost than CPI film, demand sensitivity to premium-device sales, and concentration of patents and key customers. Overall, UTG remains the mainstream upgrade direction for foldable display cover materials, with future growth mainly driven by foldable smartphones, large-size foldable devices, and automotive flexible displays.
