Abstracts

According to our (Global Info Research) latest study, the global Utidelone market size was valued at US\$ 16.26 million in 2025 and is forecast to a readjusted size of US\$ 72.00 million by 2032 with a CAGR of 8.2% during review period.

In 2025, global Utidelone production reached approximately 1.5 million units. Utidelone is a novel epothilone-class antitumor agent and a microtubule stabilizer, primarily used for the treatment of metastatic breast cancer and other solid tumors. It works by promoting tubulin polymerization and inhibiting microtubule depolymerization, thereby disrupting the mitotic process, inhibiting tumor cell proliferation, and inducing apoptosis. Utidelone retains activity against taxane-resistant tumors and may reduce certain adverse effects such as neurotoxicity to some extent, making it clinically valuable in the treatment of advanced cancers.

Utidelone, as an epothilone-class microtubule stabilizer, operates within a relatively niche yet clinically valuable segment of the antitumor chemotherapy market, primarily used for the treatment of metastatic breast cancer and other solid tumors. With the rising incidence of breast cancer and prolonged patient survival, the demand for later-line therapies continues to grow, providing a stable market foundation for this class of drugs. From a competitive landscape perspective, taxanes such as Paclitaxel and Docetaxel have long dominated the market and established well-developed clinical application systems. However, limitations such as drug resistance and neurotoxicity persist. Utidelone offers differentiated competitive advantages due to its efficacy and safety in patients resistant to taxanes. On the policy side, its inclusion in the national reimbursement drug list helps improve patient accessibility and promote market expansion, although healthcare cost-control measures and volume-based procurement policies continue to exert pressure on pricing. From a competitive standpoint, antitumor

treatment is gradually shifting toward targeted therapy and immunotherapy, putting pressure on the traditional cytotoxic drug market. Therefore, the future market performance of utidelone will depend on its clinical positioning in later-line therapy, the accumulation of real-world efficacy and safety data, and its advantages in specific patient populations (such as drug-resistant patients), as well as its overall competitiveness in pricing, distribution channels, and clinical promotion.
