## Abstracts

The global Utilities OMS Software market size is expected to reach \$ 2148 million by 2032, rising at a market growth of 12.0% CAGR during the forecast period (2026-2032).

Utilities OMS Software (Outage Management System Software) is a specialized, real-time software application suite built for utility providers (electric, gas, water, telecom) to monitor, diagnose, respond to, and resolve service outages efficiently. It serves as the central command-and-control platform for outage management workflows, integrating data from grid sensors, smart meters, customer feedback, and field crews to minimize downtime, improve customer communication, and ensure regulatory compliance.

Unlike disjointed legacy tools (e.g., manual call logs, standalone GIS maps), OMS software unifies all outage-related data and processes into a single interface, leveraging automation, predictive analytics, and spatial visualization to transform reactive outage response into a proactive, data-driven operation. It is a core component of grid modernization and smart utility initiatives worldwide.

This report studies the global Utilities OMS Software demand, key companies, and key regions.
