Abstracts

According to our (Global Info Research) latest study, the global Utility Flare market size was valued at US\$ 574 million in 2024 and is forecast to a readjusted size of USD 925 million by 2031 with a CAGR of 7.4% during review period.

Utility Flares are employed in applications which do not require smokeless burning or where smokeless flaring can be achieved without the use of an additional assist medium. They do not require auxiliary gas streams such as steam or air, two fluids normally used to improve smokeless capacity. They include a Dynamic Seal in the base of the tip to reduce purge gas cost and prevent flashback. Also, a stainless steel flame retention ring is designed to prevent flame lift off.
