## Abstracts

According to our (Global Info Research) latest study, the global Utility Locating Equipment market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Location Equipment that's used to locate underground and buried utilities such as water lines and cables. Normally, Location Equipment has two types, one being magnetic locators, and the other being pipe/cable location equipment.

Magnetic locators are primarily used for locating a single point such as a property corner pin made of rebar or water pipe. Magnetic locators basically locate anything that a magnet would stick to, hence 'magnetic locator'. It can detect any ferrous (iron/steel) object that is isolated, such as a steel property pin, steel manhole cover, steel water or gas valve. A magnetic location should not to be used or preferred for buried utility detection, as a pipe & cable locator is the appropriate instrument for these applications.

Pipe and Cable Locators are the second type of utility location equipment we sell that's used for location of underground buried utilities. Pipe and Cable Locators in their basic form are two parts, one is a transmitter, and the other being a receiver. The transmitter part is used to induce a signal onto a pipe or cable and then the wand, or receiver, is used to locate the signal that the line is producing.

The Global Info Research report includes an overview of the development of the Utility Locating Equipment industry chain, the market status of Oil & Gas (Magnetic Locators, Pipe and Cable Locators), Electricity (Magnetic Locators, Pipe and Cable Locators), and key enterprises in developed and developing market, and analysed the cutting-edge
