## Abstracts

The global UV Absorber 1577 market size is expected to reach \$ 85.18 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

UV Absorber UV-1577 (CAS No. 147315-50-2) is a high-performance triazine-based light stabilizer primarily used in polymer materials. Characterized by low volatility, high thermal stability, and excellent compatibility, it is particularly well-suited for applications involving polycarbonate (PC), polyesters, PET, and plastic films; it effectively absorbs ultraviolet radiation within the 270–380 nm wavelength range, thereby preventing material yellowing and degradation.

The key raw materials for UV Absorber 1577 include cyanuric chloride, resorcinol, and n-hexyl chloride. The primary technical challenges lie in the selective control of the triazine ring substitution reaction and the high-purity decolorization treatment of the finished product, ensuring that the initial color of the substrate remains unaffected in downstream applications. The product is priced at approximately \$50–75 per kilogram. By 2025, global sales volume is projected to reach the thousand-ton level, with gross margins typically ranging between 24% and 33%.

The automotive industry has reached new heights in its requirements for the transparency and yellowing resistance of plastic components (such as panoramic sunroofs and light covers); the highly efficient protection and minimal color shift offered by the UV absorber UV-1577 align perfectly with the quality demands of lightweight design. Concurrently, increasingly stringent global sustainability standards for infrastructure—which mandate that outdoor construction materials possess a weather-resistance lifespan of over ten years—have directly driven the market penetration of high-performance triazine-based absorbers. As the global manufacturing sector transitions

toward products characterized by longevity and high reliability, the UV absorber UV-1577—distinguished by the ultra-low volatility and exceptional thermal stability conferred by its hydroxyphenyl triazine structure—is gradually displacing traditional benzotriazole-based products in high-end automotive coatings, architectural panels, and photovoltaic modules.

This report studies the global UV Absorber 1577 production, demand, key manufacturers, and key regions.
