The global UV Absorber for Coating market size is expected to reach \$ 1414.7 million by 2029, rising at a market growth of 5.6% CAGR during the forecast period (2023-2029).

UV absorbers are light stabilizers that function by absorbing damaging UV radiation, protecting plastics and coatings in much the same way that sunscreens protect our skin when we are outdoors. This mechanism is complementary to the free radical scavenging mechanism of HALS, and as a result these additives are often used in combination to achieve higher performance.

This report studies the global UV Absorber for Coating production, demand, key manufacturers, and key regions.
