Abstracts

The global UV Absorber UV-P market size is expected to reach \$ 65.16 million by 2032, rising at a market growth of 3.6% CAGR during the forecast period (2026-2032).

UV Absorber UV-P (chemical name: 2-(2H-benzotriazole-2-yl)-p-toluene) is a benzotriazole UV absorber with strong absorption of UV light in the 270-380nm wavelength range. It effectively absorbs and dissipates UV energy, thereby protecting polymer materials from photoaging and degradation. Its molecular structure is stable, non-volatile, and heat-resistant, providing excellent durability and migration resistance during polymer processing.

The upstream supply of UV absorber UV-P, primarily relies on basic chemical raw materials, including 2-nitroaniline, 4-methylphenol, sodium nitrite, acids, and reducing agents. It is typically prepared by diazotizing 2-nitroaniline and then coupling it with 4-methylphenol. Regarding industry development, UV-P, a traditional and widely used UV absorber, faces market demand closely tied to the growth of industries like plastics and coatings, as well as increasing demands for product weather resistance. Currently, the industry faces both pressure and opportunities stemming from tightening environmental regulations and a shift toward green manufacturing.

In 2025, global sales volume for the UV absorber UV-P is projected to reach approximately 5,500 tons, with an average price of around \$8-10 per kilogram; the gross profit margins for major industry manufacturers are estimated to range from 18% to 30%.

UV-P is a well-established benzotriazole-based light stabilizer. Demand for this product is primarily driven by the requirements of outdoor plastics, architectural coatings,

packaging films, automotive interior and exterior components, electronic and electrical enclosures, and adhesive materials for enhanced weather resistance, color retention, and extended service life. Compared to newer-generation, high-molecular-weight, low-migration, or triazine-based UV absorbers, UV-P offers distinct advantages: a long history of application, relatively controllable costs, and broad compatibility with various resins, making it suitable for use as a general-purpose weather-resistance additive. Moving forward, UV-P is expected to maintain a steady level of demand within common materials such as PVC, PS, PET/PBT, acrylic resins, PU, and PC.

This report studies the global UV Absorber UV-P production, demand, key manufacturers, and key regions.
