Abstracts

The global UV Absorber UVT-150 market size is expected to reach \$ 153 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

In 2025, global UV Absorber UVT-150 production reached approximately 4,570 tons, with an average global market price of around US\$22 per kilogram. UVT-150 (also known as octyl triazone, ethylhexyl triazone) is a kind of high efficient oil soluble UVB absorber that is a triazine derivative. The UVB absorption value of UVT-150 can reach to 1500 at 314nm , so it can achieve a high SPF with a small amount addition. It's very stable , and the structure will not change under strong sunlight.

The market for UV absorber UVT-150 is undergoing a transition from conventional protection toward efficient and compliant solutions. As one of the most potent UVB absorbers available, its core advantage lies in high absorption efficiency with low addition levels, making it indispensable in sunscreen formulations. Demand is driven by upgrading consumption of sun care products and increasing durability requirements for industrial polymers. Regulatory shifts are reshaping the landscape?the EU has imposed strict controls on certain UV absorbers under POPs regulation in 2025, while China is advancing environmental information surveys and industry standards for related substances. This creates substitution opportunities for compliant and efficient varieties like UVT-150. On the supply side, Chinese manufacturers hold a notable share of global capacity, yet face pressure for technological upgrading in high-end segments. Overall, the UVT-150 market is in a phase of concurrent technological evolution and tightening regulations, where compliance capability and product performance will define competitive differentiation.
