Abstracts

The global UV Cold Cathode Lamp market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

UV cold cathode lamps are instant starting and utilize a large cylindrical cathode instead of a tungsten filament. Due to this construction, the lamp is not adversely affected by frequent starting and the life is considerably in excess of other lamp types. Cold cathode germicidal lamps have favorable operating characteristics at reduced temperatures. They are, therefore, widely used in walk-in refrigerators and holding rooms.

This report studies the global UV Cold Cathode Lamp production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for UV Cold Cathode Lamp, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
