Abstracts

The global UV Curable High Hardness Transparent Coating market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The first patent for ultraviolet (UV) curing coatings was born in 1947. After more than half a century of development, UV curing coatings have become a relatively mature technology, especially with the improvement of people's environmental protection awareness, production and researchers pay more attention Development and application of UV-curable coatings. UV-curable coating is a kind of green and environment-friendly coating, which fully conforms to the '4E' principle. Generally, the energy consumption of UV curing is 1/5 of that of thermal curing, and UV-curing coating contains less volatile components and less pollution, which is the most attractive to researchers. And the developer is that UV-curable coatings can reduce the consumption of raw materials, which is conducive to reducing economic costs.
