According to our (Global Info Research) latest study, the global UV Curable Inks market size was valued at USD 3009.7 million in 2023 and is forecast to a readjusted size of USD 7171.7 million by 2030 with a CAGR of 13.2% during review period.

UV (ultraviolet) curable ink is a kind of inks, with ultraviolet light from different wavelengths and energy to make ink monomer polymerization into polymers in the connection of material, make the ink film and drying.

UV curable inks speed up the printing process by reducing the drying time while facilitating superior bonding. UV curable inks do not employ the use of environmentally harmful solvents, additionally; they do not cause loss of coating thickness and volume loss in final prints. This causes a reduction in waste, pollutant emissions and energy use. UV curable inks are being increasingly used in printing applications as they offer higher productivity and increased printing throughput.

The major players in global UV Curable Inks market include DIC, Toyo Ink Group, Siegwerk, etc. The top 3 players occupy about 60% shares of the global market.
