Abstracts

According to our (Global Info Research) latest study, the global UV Curable Optically Clear Adhesive (OCA) market size was valued at US\$ 1452 million in 2025 and is forecast to a readjusted size of US\$ 2325 million by 2032 with a CAGR of 6.9% during review period.

OCA optical adhesive is a special adhesive used for bonding transparent optical components (such as display covers, touch panels, etc.). It requires colorless transparency, light transmittance of over 90%, good bonding strength, usability at room temperature or medium temperature, and low curing shrinkage. OCA optical adhesive is one of the important raw materials for touch screens. Generally, OCA is a double-sided laminate product made by creating a substrate-free film from optical acrylic pressure-sensitive adhesive, then bonding a release film to the top and bottom layers. UV refers to electromagnetic radiation with wavelengths between 10nm and 400nm. It has high energy and is often used for the rapid curing of polymers.

UV Curable Optically Clear Adhesive (OCA) is a high-performance optical adhesive used for bonding transparent materials. It has extremely high optical transparency and excellent adhesion, and is mainly used in touch displays, touch panels, OLED/LCD modules, optical lenses, and optoelectronic components. These optical adhesives rapidly cure into a film under ultraviolet (UV) irradiation, achieving high-strength, bubble-free, and yellowing-free bonding. They also possess temperature resistance, moisture resistance, and aging resistance, making them an indispensable key material for modern high-end displays and optical component assembly.

In 2025, the global production of UV Curable Optically Clear Adhesive (OCA) was

approximately 77.04 million square meters. There was a significant price difference between domestic and imported brands, with an average price of approximately US\$18.32 per square meter and a gross profit margin of approximately 22.32%. Stick has a production line with a capacity of 26 million square meters. Vancete has a single-line capacity of 7.6 million square meters.

With the continuous upgrading of display technology and the ongoing expansion of the smart terminal market, the UV-curable OCA optical adhesive market has experienced rapid development. High-end display technologies such as OLED, AMOLED, and flexible screens place higher demands on optical adhesive materials with bubble-free properties, high transparency, and high reliability, driving the continuous increase in the application penetration rate of UV-curable OCA. At the same time, applications outside of consumer electronics, such as automotive center console screens, dashboard displays, and HUD head-up displays, are also growing rapidly and will become an important source of new demand in the coming years. The global electronics manufacturing industry is evolving towards thinner, lighter, higher-resolution, and modular designs, further increasing the demand for high-performance OCA materials. Despite the promising market growth prospects, the UV-curable OCA optical adhesive industry still faces several challenges. First, fluctuating raw material costs and the R&D investment required for high-performance formulations keep production costs high, limiting the profit margins of some mid-to-low-end manufacturers. Furthermore, the process quality of optical adhesive products requires high-level equipment and environmental control, and the preparation and curing processes are complex, presenting certain technical barriers. Industry standards are not yet globally unified, and compliance requirements in different regions also pose challenges for companies' cross-border operations. In addition, alternative adhesive materials such as pressure-sensitive adhesives and hot melt adhesives face competition in some low-end applications. In the downstream market, consumer electronics remains the largest single source of demand for UV-curable OCA optical adhesives. With the accelerated iteration of smartphones, tablets, laptops, and wearable devices, especially the increased adoption of foldable screens, flexible screens, and micro-LED display technologies, the demand for high-transparency, high-durability optical adhesive materials continues to grow. At the same time, emerging niche markets such as automotive electronics and medical display devices are also showing rapid growth momentum. In the coming years, with the widespread adoption of technologies such as smart cockpits and Advanced Driver Assistance Systems (ADAS), the applications of OCA optical adhesives will further expand from traditional mobile terminals to the automotive, industrial, and medical markets.
