Abstracts

The global UV Curing Hydrophilic Coating Machine market size is expected to reach \$ 445 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

UV curing hydrophilic coating machines are surface treatment equipment used for applying functional coatings, primarily in medical catheters, endoscopic instruments, optical lenses, semiconductor devices, and polymer surface modification applications. The system applies a hydrophilic coating material uniformly onto a substrate and uses ultraviolet (UV) light to trigger a photoinitiated crosslinking reaction, forming a stable, uniform, and low-friction hydrophilic layer on the surface. A typical system consists of a coating unit, conveying system, UV curing module, temperature control module, and automated control system. It is characterized by fast curing speed, high coating uniformity, strong process controllability, and wide material compatibility, making it widely used in high-precision medical devices and advanced industrial material processing. In 2025, the global UV curing hydrophilic coating machine market is estimated at approximately USD260 million, with annual shipments of around 3,250 units, resulting in an average selling price of about USD80,000 per unit. The market is expected to grow at a CAGR of approximately 7.2%. Typical single-line production capacity ranges from 300 to 1,500 units per year, while industry gross margins generally fall between 30% and 48%.
