A UV Decontamination Tunnel is a specialized system used for disinfecting and decontaminating items, such as packages, products, or equipment, using ultraviolet (UV) light. It typically consists of a tunnel-like structure where the items pass through while being exposed to UV-C light, which effectively kills or inactivates harmful microorganisms, such as bacteria, viruses, and fungi. UV decontamination tunnels are widely used in industries like healthcare, food processing, pharmaceuticals, and logistics, especially for sterilizing products that cannot undergo chemical disinfection. They provide a fast, chemical-free, and non-contact method of ensuring hygiene and safety in various environments.
