## Abstracts

According to our (Global Info Research) latest study, the global UV Disinfection market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

UV disinfection equipment uses UV light for the disinfection process and does not involve the usage of chemicals. Hence, UV disinfection is considered more user-friendly and eco-friendly than other types of disinfection equipment. UV light has become an established water treatment disinfection technology due to its extremely effective ability to kill or inactivate many species of disease-causing microorganisms. Ultraviolet light disinfection is effective on bacteria, protozoan parasites (e.g. Giardia, Cryptosporidium), and can also be effective for most viruses, providing sufficiently high UV dosage rates are used.

In China market, key players of UV Disinfection include Newland EnTech, Trojan Technologies, Oceanpower, Xylem, Onyx and SUEZ, etc. Top five players occupy for a share about 66%. In terms of application, Municipal Wastewater Treatment is the largest market, with a share over 28%.
