According to our (Global Info Research) latest study, the global UV Femtosecond Laser market size was valued at US\$ 391 million in 2024 and is forecast to a readjusted size of USD 591 million by 2031 with a CAGR of 6.1% during review period.

Ultraviolet femtosecond laser is a laser device that can output ultrashort pulses (femtosecond level, i.e. 10^{-15} seconds) in the ultraviolet band (usually 343 nm or 355 nm), and converts infrared or visible light femtosecond pulses into ultraviolet light through nonlinear frequency conversion technology. It is characterized by extremely short pulse duration, high photon energy, and small processing heat-affected zone. It is suitable for precision micromachining, semiconductor manufacturing, medical equipment processing, ultrafast spectral analysis and scientific research, and can achieve high-precision processing and scientific detection with extreme time resolution.
