The global UV Industrial Printer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

UV Industrial Printer use ultraviolet LED lights to dry or cure ink during the printing process. Attached to the print carriage is a UV light source that follows the print head. The LED light spectrum reacts with photo-initiators in the ink to instantly dry it so that it immediately adheres to the substrate. With instant curing, UV printers can create photorealistic graphics on a variety of materials including items like plastic, glass and metal.
