According to our (Global Info Research) latest study, the global UV Leak Detection Lamp market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

UV leak detection lamp, also known as a UV leak detection light or black light, is a handheld device that emits ultraviolet (UV) light at specific wavelengths to detect substances or materials that fluoresce under UV illumination. These lamps are commonly used in conjunction with fluorescent leak detection dyes to pinpoint leaks in various systems, such as refrigeration systems, air conditioning units, and automotive air conditioning systems. When the UV lamp is used in a dark environment, it causes the fluorescent dye to emit visible light, making leaks or imperfections easily visible to the naked eye. UV leak detection lamps are valuable tools for maintenance and repair technicians.
