The global UV LED Double-Sided Exposure Machine market size is expected to reach \$ 556 million by 2032, rising at a market growth of 10.4% CAGR during the forecast period (2026-2032).

In 2025, global production of UV LED double-sided exposure machines reached approximately 1,980 units, with an average selling price of around USD 136,000 per unit. UV LED double-sided exposure machines are specialized equipment used in the pattern transfer stage of printed circuit board manufacturing, utilizing UV LED light sources to expose both sides of the substrate simultaneously or sequentially within a single process, transferring circuit patterns from photomasks to photoresist layers. These machines typically feature highly uniform UV LED arrays, precise double-sided alignment systems, and stable energy control, improving production efficiency and registration accuracy for double-sided PCBs while reducing energy consumption and maintenance costs, making them an important exposure process equipment in mid-to-high-end PCB manufacturing.

Currently, the market for UV LED double-sided exposure machines is experiencing steady growth characterized by process substitution and energy efficiency upgrades, driven by PCB manufacturers' efforts to improve productivity, reduce operating costs, and meet stricter environmental requirements. Market conditions show that this segment is dominated by manufacturers with strong capabilities in UV LED light source integration, double-sided alignment control, and extensive PCB process expertise, serving downstream customers in consumer electronics, industrial control, automotive electronics, and communications equipment.
