According to our (Global Info Research) latest study, the global UV Lithography Machines market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Lithography machines are divided into visible light lithography machines and ultraviolet light lithography machines according to the light source. Among them, ultraviolet light lithography machines are divided into three types: UV, DUV, and EUV. The latest lithography technology is the EUV lithography systems, whose wavelength is shortened to 13.5nm, and the process node is increased to 7-3nm. At present, the optical lithography technology is moving towards the direction of shortening the wavelength of the exposure light source, increasing the numerical aperture and improving the exposure method.
