Abstracts

The global UV Lithography Machines market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lithography machines are divided into visible light lithography machines and ultraviolet light lithography machines according to the light source. Among them, ultraviolet light lithography machines are divided into three types: UV, DUV, and EUV. The latest lithography technology is the EUV lithography systems, whose wavelength is shortened to 13.5nm, and the process node is increased to 7-3nm. At present, the optical lithography technology is moving towards the direction of shortening the wavelength of the exposure light source, increasing the numerical aperture and improving the exposure method.

This report studies the global UV Lithography Machines production, demand, key manufacturers, and key regions.
