According to our (Global Info Research) latest study, the global UV Nanosecond Air-Cooled Laser market size was valued at US\$ 368 million in 2024 and is forecast to a readjusted size of USD 461 million by 2031 with a CAGR of 3.2% during review period.

The UV nanosecond air-cooled laser is a device that outputs laser light in the UV band (usually 355 nm). Its pulse width is in the nanosecond level. It uses an air-cooling system for heat dissipation, and does not require a complex water-cooling device. The laser has high beam quality, excellent thermal management performance, and a compact structural design, making it suitable for precision machining and scientific research applications. It is widely used in microelectronics manufacturing, PCB drilling, fine processing of glass and ceramics, and biomedical fields, especially for processing materials that are sensitive to heat.
