## Abstracts

The global UV Optical Adhesives for CPO Optical Engines market size is expected to reach \$ 221 million by 2032, rising at a market growth of 13.2% CAGR during the forecast period (2026-2032).

In 2025, the global sales volume of UV optical adhesives for CPO optical engines is projected to reach approximately 200 tons, with an average price of around \$400 per kilogram.

UV optical adhesives for CPO optical engines are fast-curing bonding materials utilized in co-packaged optics (CPO) modules, silicon photonics chips, lens arrays, fiber arrays, and optoelectronic interconnect interfaces. These adhesives are required to exhibit low shrinkage, low volatility, minimal optical loss, controllable refractive indices, and long-term reliability under thermal and humid conditions, thereby ensuring optimal coupling efficiency and packaging stability within high-speed optical interconnect systems. The upstream supply chain primarily comprises acrylates, epoxies, siloxane resins, photoinitiators, and functional fillers; the downstream market consists mainly of CPO optical engines, optical modules, silicon photonics packaging, and optical interconnect equipment for AI data centers.
