Abstracts

UV PCB laser drilling machine is a device used for printed circuit board (PCB) processing. Its main function is to use ultraviolet laser technology to drill holes in PCB sheets with high precision. Such machines usually consist of components such as UV lasers, optical systems, control systems, and workbenches. The working principle of the UV PCB laser drilling machine is to precisely focus the ultraviolet laser energy on the PCB surface through the focusing and control of the laser beam to create tiny holes in the PCB sheet. This drilling method has the advantages of high speed, high precision and non-contact processing. It can achieve high-precision hole processing of PCB boards while reducing the side effects and damage caused by traditional processing methods such as mechanical cutting and chemical corrosion.
