According to our (Global Info Research) latest study, the global UV-Resistant Optical Cable market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. Negative induction phenomenon (also known as photodegradation) refers to the formation of defect centers within a fiber, resulting in a decrease in transmittance. When the fiber is exposed to light with a wavelength below 300 nm, these defect centers are formed. The anti ultraviolet radiation optical fibers have better anti ultraviolet radiation ability than standard optical fibers. They are suitable for spectral applications such as pollution analysis and chemical treatment, ultraviolet lithography and medical diagnosis. This report is a detailed and comprehensive analysis for global UV-Resistant Optical Cable market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Diameter and by Application.
