According to our (Global Info Research) latest study, the global UV Sensors market size was valued at USD 63 million in 2023 and is forecast to a readjusted size of USD 87 million by 2030 with a CAGR of 4.7% during review period.

UV sensors, which convert light (photons) into electric current, are elements highly sensitive to the wavelength of light in the ultra-violet region. Ultra-violet light is classified as “UV-A”, “UV-B” and “UV-C”, depending on the wavelength and as the wavelengths become shorter more damage is caused to life forms. These sensors are used in industrial applications as light source monitors for equipment that sterilizes using UV-C with a short wavelength. Sensors used in our daily lives are primarily intended for detecting UV-A and UV-B ranges with longer wavelengths from UV light that is included in the sun's rays.

In China market, UV Sensors key players include HAMAMATSU, Vishay, Silicon Labs, GenUV, Sglux, etc. The top five manufacturers hold a share about 75%. East China and South China is the largest market, both with a share about 25%, followed by North China, with a share about 20 percent. In terms of product, UVA is the largest segment, with a share about 55%. And in terms of application, the largest application is Industrial, followed by Medical, Automotive, Consumer Electronics, Environmental and Food Testing, etc.
