According to our (Global Info Research) latest study, the global UV-VIS-NIR Spectrometer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The UV-VIS-NIR spectrometer is an instrument capable of measuring the ultraviolet-visible-near-infrared spectral range. It can analyze the light absorbed, reflected or transmitted by the sample to obtain information about the optical properties of the sample. The UV-VIS-NIR spectrometer uses the sample's absorption, reflection or transmission of light of different wavelengths to obtain the spectral information of the sample. By analyzing the sample's response to light of different wavelengths, the composition, structure and properties of the sample can be inferred.

The UV-VIS-NIR spectrometer covers spectral measurements from ultraviolet (UV, wavelength about 200 nanometers) to near-infrared (NIR, wavelength about 2500 nanometers), with high resolution, high sensitivity and wide range of applications.
