UVC air disinfection lamp is a device that uses short-wave ultraviolet rays (UVC) with a wavelength of 200-280nm to destroy the DNA/RNA structure of microorganisms to achieve air sterilization and disinfection. Its core mechanism is to emit 253.7nm wavelength ultraviolet rays through a low-pressure mercury lamp or UVC-LED light source, which directly acts on the genetic material of pathogens such as bacteria, viruses, and fungi in the air, causing them to lose their ability to reproduce, thereby achieving high inactivation efficiency.
