Abstracts

Uncoated woodfree (UWF) paper, also known as uncoated freesheet, is manufactured by processing wood into a chemical pulp that removes lignin from wood fibers.

SCOPE OF THE REPORT:

This report focuses on the UWF(uncoated woodfree)Paper in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The direction taken by local fiber costs versus that of market pulp will be another determinant of which UWF producers survive in the future. To some extent, this factor is out of their control. However, there are new filler technologies that producers can use to reduce the impact of fiber costs. Filler content is steadily increasing but there is quite a big difference in the levels between regions. Europe and North America have significantly higher filler levels.

The worldwide market for UWF(uncoated woodfree)Paper is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
