Abstracts

The global Vacuum Automatic Film Coating Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Vacuum automatic film coating machine can perform the dual purpose of 'cleaning' and 'transparent film protection' for brown film, silver salt film and black negative film. The two sets of rollers can operate synchronously to complete double-sided cleaning and various film applications, and can control the tension to keep the negative film of the film applicator flat. The upper axle presses the transparent film and the lower axle presses the pad paper with a wide size. The negative film of the automatic film pasting machine forms a sandwich, which is convenient for the burial and cutting of the final shape, and can save the expensive protective film. Before using the film, clean and remove static electricity at the same time to avoid the trouble of being unable to remove dust afterwards. The special design of the automatic film pasting machine can clean and press the film on the glass.
